

Notes:
(1) Green LED is not necessary, but a nice proper function visual indicator

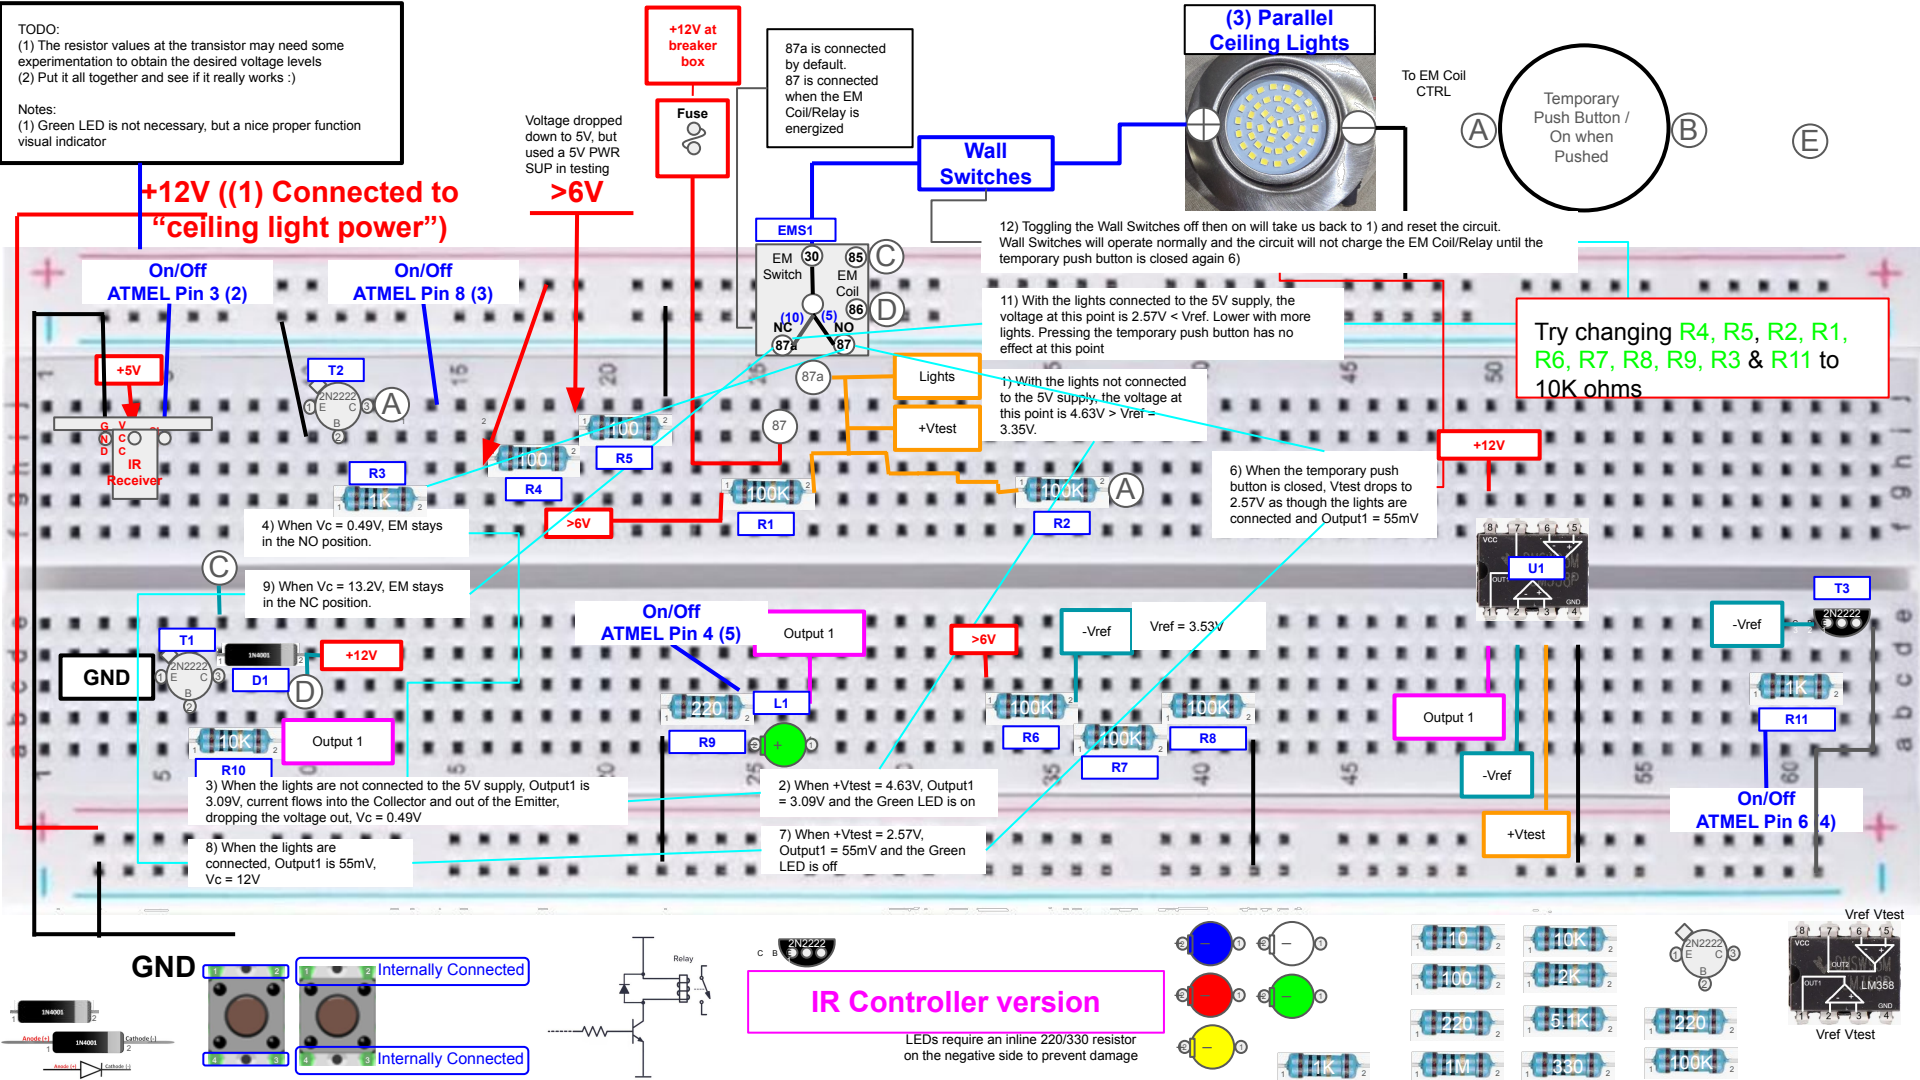

Notes:
(1) Green LED is not necessary, but a nice proper function visual indicator

TODU:
 (1) The resistor values at the transistor may need some experimentation to obtain the desired voltage levels
 (2) Put it all together and see if it really works :)

Notes:
 (1) Green LED is not necessary, but a nice proper function visual indicator

When using ISP to program the chip

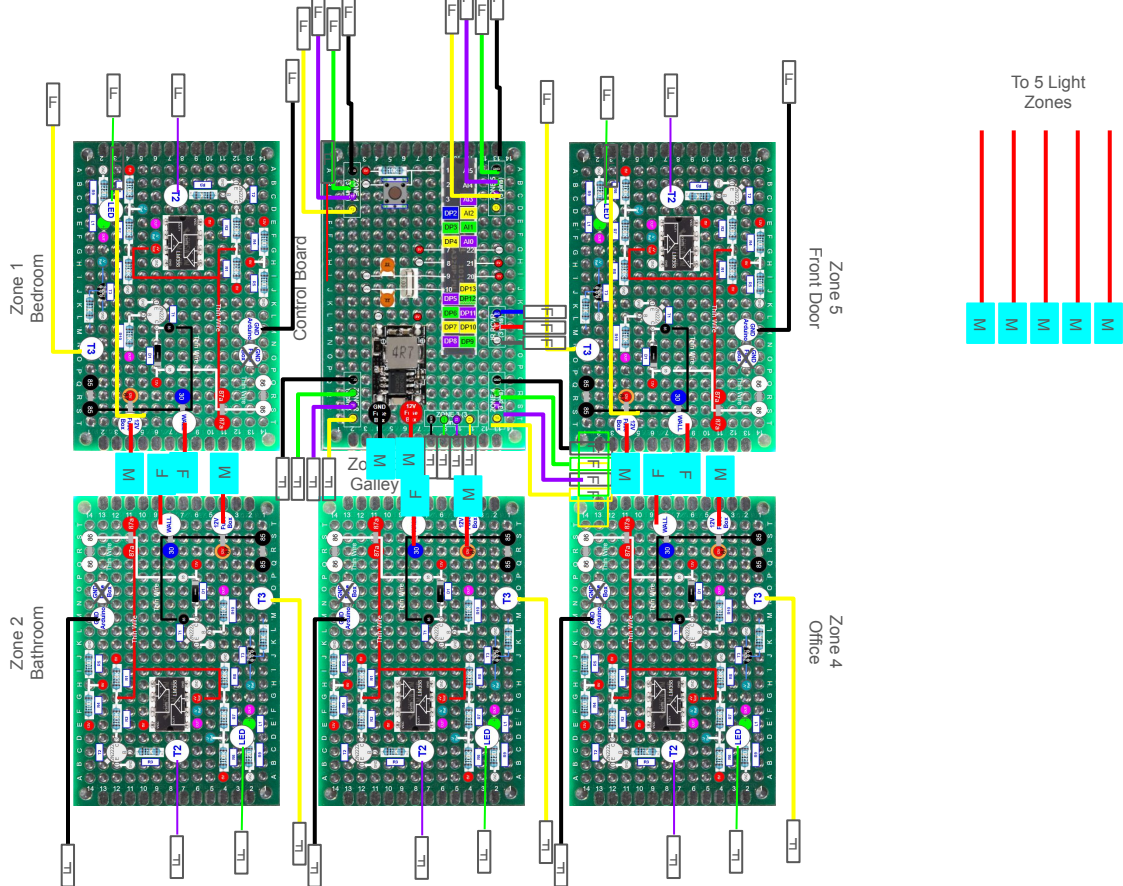

Arduino Uno R3 Pinout

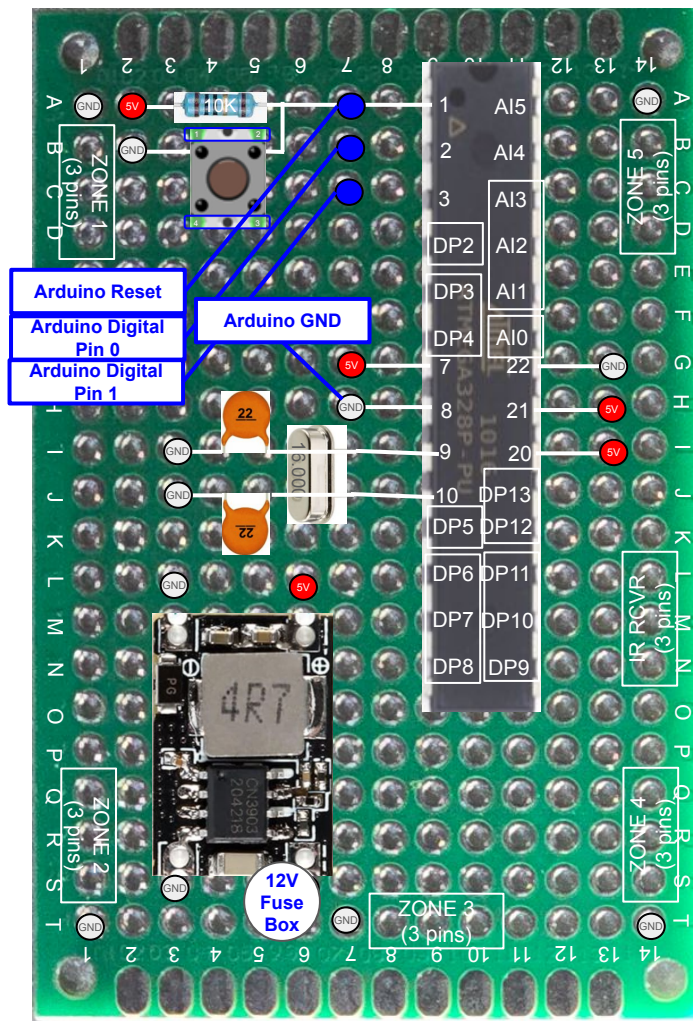

F
QTY: 12

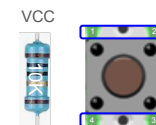

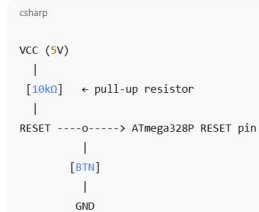

M
QTY: 12

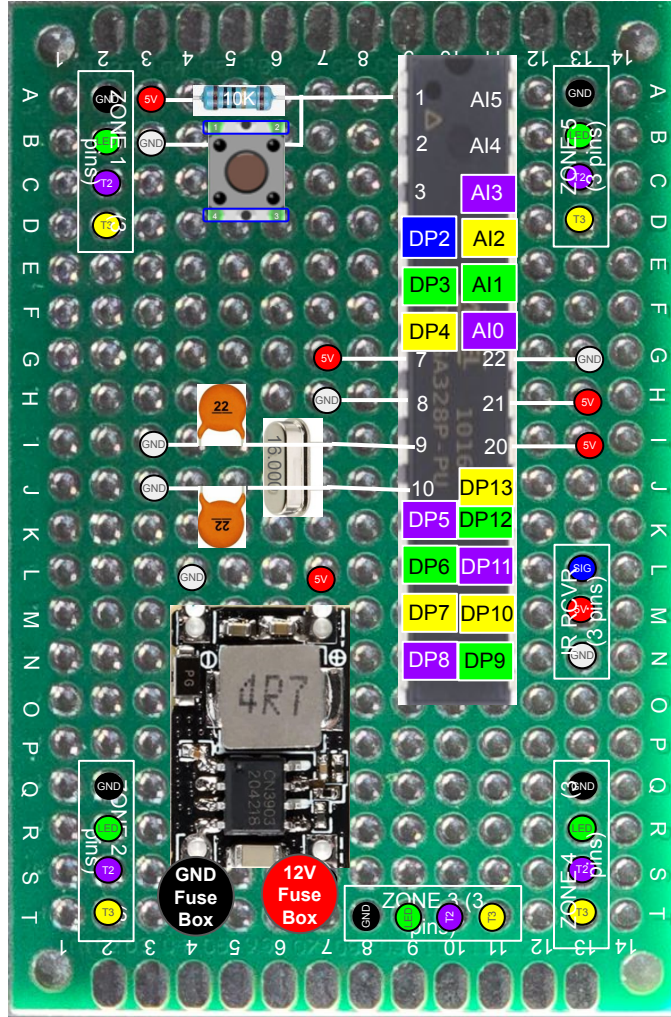

Remember to tie the
GND on the Microcontroller
and the GND on the Light
Controller boards together

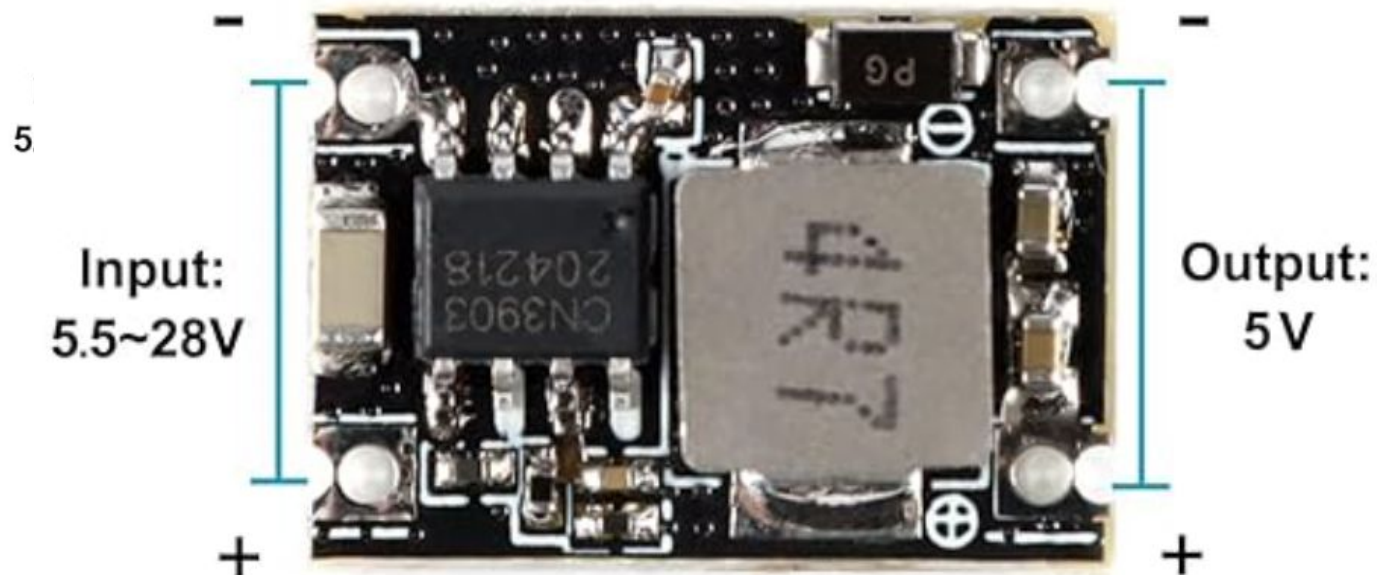

The Classic Reset Circuit

Parameter Introduction

Parameter Introduction

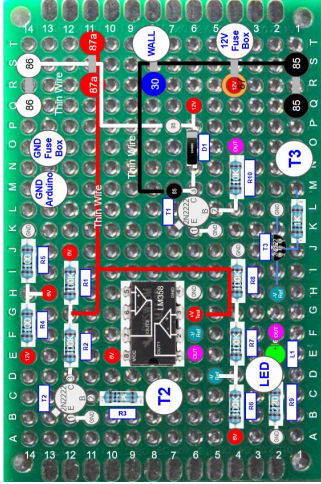

Zone and Control Board wires terminate in a female end

Connect with a double male ended wire

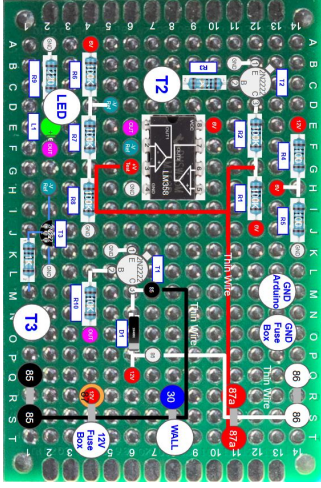

Try to find plug of some kind for the control board power connection for easier connect/disconnect for development/testing

Ensure that power wires don't require larger holes to be drilled

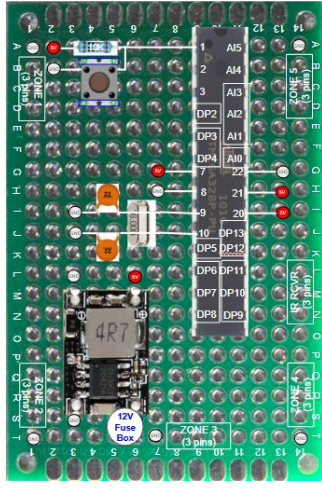

Zone 2
Bathroom

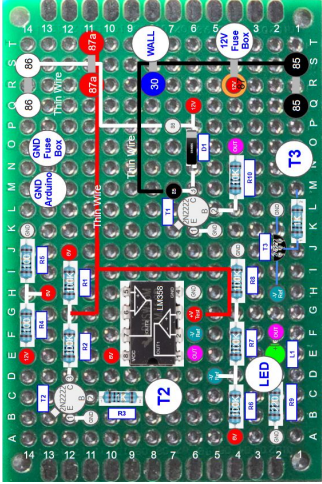

Zone 1
Bedroom

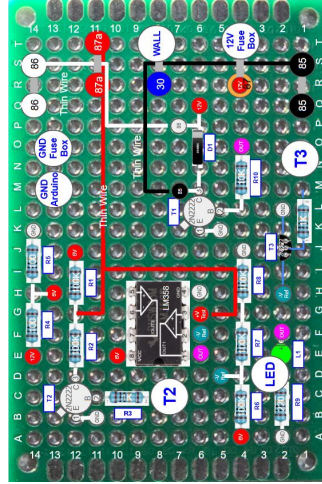

Control Board

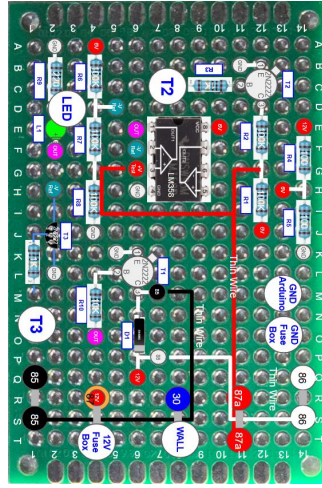

Zone 3
Galley

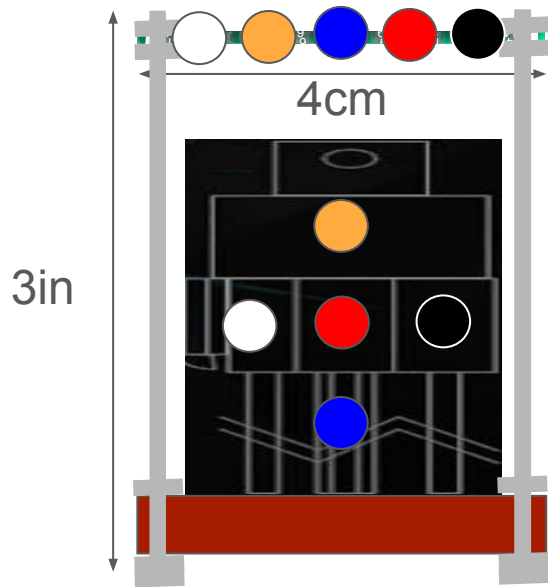

Zone 4
